

DEPOVIEW VS. DEPOVIEW DVD › › › › › ›

Both DepoView and DepoView DVD are excellent choices for reviewing video depositions. However, if you're trying to decide which product is best for your needs, here's a handy product overview and feature comparison chart.

inData DepoView® DVD

DepoView DVD is a new product by inData Corporation that allows you to review transcripts and video depositions on a personal computer or a television using a standard DVD player. Utilizing patent-pending technology, it is the only product that allows you to view the full transcript on TV, in addition to the video footage.

*Note – DepoView DVD includes a complimentary license of DepoView software. So when in doubt, ask for a DepoView DVD so you'll get the best of both worlds.

Key Benefits of DepoView DVD:

- › Ability to review transcripts and video, even when a computer is unavailable
- › Easy as playing a movie in your DVD player
- › Includes DepoView software for creating video clips
- › Supports higher resolution MPEG-2 video for crisper, clearer images

inData DepoView®

DepoView is video review software that enables you to view a video deposition, the associated transcript, and exhibits on a computer. Using DepoView, you can search for key words in the transcript, create video clips for trial, print full or condensed transcripts, take snapshots of video frames, and more.
