

TimeCoder Pro v52: Replacing the Vendor Logo on DepoView DVDs

You can replace the default inData logo that appears at the bottom right of the DepoView DVD menu page with your company logo. In addition, you can update your vendor contact information at any time. Once you complete the steps below, your logo and updated vendor contact information will be used each time you create a DepoView DVD.

1. Exit TimeCoder Pro and the DepoView DVD Creator.
2. Create a bitmap graphic that is 72 DPI and 280 x 120 pixels in size. inData recommends you use a white background for the vendor logo so that it blends into the background of the DVD menu.
3. Save it as Logo.bmp.
4. Copy the Logo.bmp file to the VendorData folder.
By default, this location is C:\Documents and Settings\All Users\Application Data\inData\inDVDDepo\5.x\VendorData.
5. Click **Yes** to confirm you want to overwrite the existing file.
6. When you export to DepoView DVD and the DepoView DVD Creator opens, your logo will appear in the lower right-hand corner of the DepoView DVD menu preview screen, as shown below.
7. In addition, you can update the vendor contact information on the DepoView DVD menu preview screen. The vendor contact information is saved for future uses of the DepoView DVD Creator.
8. Once the DepoView DVD is authored and burned, the custom logo and your vendor contact information will appear on the main DVD menu when the DepoView DVD is played back on a set-top DVD player or with DVD software on a PC/Mac.
